Practice Set 5B — Equations and Linear Functions

Name: _____ Date: _____ Score: _____ / 30

Solve each problem. Show every step. Check your solutions by substitution.

1. Solve the system of equations: (10 pts)

$2x + 3y = 12$

$x - y = 1$

2. Solve the quadratic equation $x^2 - 5x + 6 = 0$ by factoring. (10 pts)

3. A line passes through the points (1, 3) and (4, 9). Find its slope and write its equation in the form $y = mx + b$. (10 pts)
